RESEARCH EXPERIENCE

UltraLight Dark Matter Simulations and Observational Constraints January 2019 - Present
Professor Nikhil Padmanabhan & Professor Richard Easther *Yale University*

Developing the ChapelUltra pseudo-spectral solver, using it to simulate UltraLight Dark Matter, and comparing with data to assess candidate feasibility. Project supported by Future Investigators in NASA Earth and Space Science grant.

Gravitational Signatures of Primordial Black Holes September 2017 - March 2019
Professor Nikhil Padmanabhan & Professor Richard Easther *Yale University*

Modeled primordial black hole creation mechanisms in the early universe, constrained their 2-body interactions and dynamics, and calculated resultant gravitational wave spectra from mergers for allowed parameter space. Publication in JCAP.

Particle Mesh Code for Bi- and Power Spectra January 2017 - August 2017
Professor Nikhil Padmanabhan *Yale University*

Wrote particle mesh code to calculate the power spectrum and bispectrum from GADGET-2 simulation data in C++. Tested the code by generating a Gaussian random field to run through the code and compared results with analytically calculated power spectra and bispectra for the Gaussian case.

Data Reduction for SMARTS Consortium at Yale November 2016 - May 2017
Professor Charles Bailyn *Yale University*

Reduced a backlog of AGN spectra collected by the Yale SMARTS Consortium using Yale's software pipeline. Prepared data for online publication for use by collaborators.

Supermassive WIMP Production in the Early Universe August 2015 - May 2016
Professor Patrick Crotty *Colgate University*

Wrote senior honors thesis titled "Constraining WIMPzilla Production in the Inflationary Phase of the Early Universe." Wrote an equation solver in Python, using Numpy and Scipy for analysis and Matplotlib for visualizations. Varied coefficients describing shape of sigmoid inflaton field and calculated resulting DM abundances with assumed particle mass. Presented preliminary results at Syracuse University Undergraduate Research Day.

Volunteer Archaeologist at South Asasif Conservation Project June - July 2015
Dr. Elena Pischikova *Luxor, Egypt*

Supervised team of workers doing excavation; organized, labeled, and stored finds, and documented site progress daily. Used dumpy-level photography and measurements to produce accurate technical drawings of the site. Wrote up extensive field reports for the site director.

Observations and Analysis of 2014 Flare of Blazar 3C454.3 June 2014 - August 2014
Professor Thomas Balonek *Colgate University*

Observed AGN at Foggy Bottom Observatory at Colgate University on a 16-inch, Newtonian-Cassegrain telescope. Reduced all data using UNIX, IRAF, and Pascal-based software, with analysis focusing on 3C454.3 and its historic flare that summer. Compared our optical data with Yale SMARTS data of the same object to find excellent agreement, as well as radio data from the Submillimeter Array. No correlation between radio and optical flares was found.
